ABHISHEK DASS

Data Analytics & Policy Research | Applying for Young Professional (YP0626CEP01), RBI
Nagpur, Maharashtra, India | +91-7798927933 | abhishekdass141516@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Final-year B.Tech graduate with hands-on experience in data mining, statistical analysis, and machine learning-based anomaly detection. Skilled in building interactive Power BI dashboards, automating report generation from large data dumps, and designing complaint/issue-classification systems using Python, SQL, and REST APIs. Eager to apply data analytics and policy-research skills to support systematic complaint-trend analysis, real-time dashboard monitoring, and evidence-based policy formulation at the Reserve Bank of India.

EDUCATION

B.Tech — Computer Science and Business Systems *June 2026*
St. Vincent Pallotti College of Engineering and Technology, Nagpur

RELEVANT EXPERIENCE

Data Analytics Intern — Infosys *Aug 2025 – Oct 2025*

- **Analysed election data** using SQL, Excel, and Power BI to identify historical and current trends of Indian Election.
- **Designed Power BI dashboards** for performance tracking and analysing the Indian election trends.
- **Executed data cleaning** and strict validation checks to ensure accuracy across all analytical workflows.

Junior Software Developer — PugArch Private Limited *Jul 2025 – Jan 2026*

- Built Python-based ETL pipelines to extract, transform, and load 10,000+ structured records and integrated PostgreSQL, MySQL, and MongoDB for scalable database.
- Automated recurring data-preprocessing and reporting workflows, reducing manual effort by 60%.
- Developed full-stack (React.js / Next.js) applications to support data-driven business solutions.

Aerodynamics & Data Acquisition Lead — E-Formula AshwaRiders *Mar 2023 – Jan 2026*

- Designed real-time sensor telemetry pipelines processing 1,000+ records per session.
- Built dynamic monitoring dashboards for anomaly detection across speed, thermal, and battery performance metrics.
- Managed the complete data lifecycle — from raw acquisition to structured storage and analysis — under strict reliability requirements.

KEY PROJECTS

DL-SEC — ML-Based Anomaly Detection System *Python, CNN-LSTM, Machine Learning*

- Developed a machine-learning pipeline (CNN-LSTM) to detect irregular and anomalous patterns in streaming data.
- Built systematic monitoring workflows for anomaly tracking and trend analysis, applicable to identifying emerging issues in large-scale operational datasets.

Real-Time Vehicle Telemetry & Analytics System *Python, LabVIEW, PostgreSQL, MQTT, ETL*

- Engineered ETL workflows for real-time data extraction, transformation, and structured storage.
- Built interactive dashboards for anomaly detection and performance monitoring, processing 1,000+ records per session with reliable, low-latency pipelines.

TECHNICAL SKILLS

- Data Analytics & Statistical Tools: Power BI, Excel, SQL, Python, Statistical Analysis, Data Cleaning & Preprocessing, Data Mining
- Machine Learning / AI: Anomaly Detection, CNN-LSTM, Data Science
- Automation & Programming: Python, R, JavaScript, SQL, ETL Pipeline Development, Process Automation
