EDUCATION

St. Vincent Pallotti College of Engineering and Technology **India, Nagpur**
Bachelor of Technology in Computer Science & Business System *Expected Graduation, Mar 2026*

Concentrations: Focused on a blend of Computer Science and Business Management.
CGPA: 8.66/10
Related Coursework: Data Structures & Algorithms, Computer Organization & Programming, Object-Oriented Programming, Statistics & Applications, Business strategies, Fundamentals of management, Software design, Compiler designing, Economics, Cloud Computing, SDLC, Computer Network, IOT.

EXPERIENCE

E-Formula Ashwariders **India, Nagpur**
Aerodynamic, Data Acquisition Lead, Inventory Manager & SAE Member *Apr-2023, Present*
Designed and optimized aerodynamic components for a Formula Student vehicle, improving cooling efficiency by 15% and reducing drag by 8% through CFD simulations. Developed a large-scale data acquisition system for real-time performance monitoring, analyzed trends, and implemented design improvements. Collaborated with multi-disciplinary teams and conducted independent research from concept to deployment.

Trainity **India, Nagpur**
Data Analytics Intern Jul-2024, Jan-2025
Analyzed large-scale Instagram user data using SQL and EDA to generate insights. Built interactive dashboards in Excel and Power BI to support decision-making. Collaborated with teams and conducted independent research tasks from concept to deployment.

PugArch Private Limited **India, Nagpur**
Jr. Software Developer Jul-2025, Present
Built responsive landing pages with HTML, CSS, and JavaScript. Developed a React + Tailwind frontend, designed a PostgreSQL database, and implemented REST APIs with Node.js and Prisma. Validated integrations using Postman and collaborated with teams to deliver high-quality solutions.

PROJECTS

1. Tarkshya – Formula Student EV: Applied FSAE-level engineering for CFD simulations, data acquisition, and design optimization.
2. Elevate – Habit Tracker: Built front-end UI with HTML, CSS, and JavaScript for habit tracking.
3. Lane Detection: Implemented MATLAB computer vision algorithms for real-time lane detection using image segmentation and edge detection.
4. Wind Tunnel: Designed and built a small-scale wind tunnel to test vehicle aerodynamics.
5. Tummy Tracker: Created a Python machine learning model to predict health risks from dietary patterns, achieving high accuracy through preprocessing, model training, and optimization.
6. Ashwa Camps Website: Developed an HTML, CSS, and JavaScript site to attract Formula Bharat investors.

SKILLS

Programming: Python, C++, C, SQL, MATLAB, JavaScript, HTML, CSS
Tools & Software: Fusion 360, SolidWorks, ANSYS, STAR-CCM+, Cradle CFD, MySQL, Power BI, Excel, Git, VS Code, ORION BMS Utility, Arduino IDE, Raspberry Pi OS
Technologies: AWS, GitHub, Canva, ChatGPT
Engineering: CFD, FEA, Aerodynamic Design, Data Acquisition, Thermal Management, CAD Modelling, Design Optimization
Research: Experimental Design, Model Training, Algorithm Development, Data Analysis, Optimization
