ABHISHEK DASS

Aspiring Data Analyst | Battery Management Systems & EV Analytics
Nagpur, Maharashtra, India | +91-7798927933 | abhishekdass141516@gmail.com | LinkedIn | GitHub

PROFILE

Final-year B.Tech (Computer Science and Business Systems) student graduating June 2026, with hands-on experience in data analytics, ETL pipelines, and dashboard development across internship and industry roles. Built Power BI dashboards and SQL-driven reports as a Data Analytics Intern at Infosys, and developed Python-based ETL workflows handling 10,000+ structured records at a software firm. Brings additional experience processing real-time battery and sensor telemetry from an electric racing vehicle, pairing data analytics skill with direct exposure to EV and battery performance data.

TECHNICAL SKILLS

Data Analytics & BI: Power BI, Tableau (exposure), Microsoft Excel (advanced), SQL, Data Cleaning & Preprocessing, Data Normalization & Transformation, Dashboarding & Reporting
Programming: Python, SQL, Java, C, C++, JavaScript
Data Engineering: ETL Pipeline Development, Data Automation, Database Integration (PostgreSQL, MySQL, MongoDB), Real-Time Data Pipelines
EV / Sensor Systems: Battery & thermal telemetry monitoring, sensor data acquisition, MQTT, anomaly detection, IoT data streams
Tools: Git, GitHub, LabVIEW, Postman

RELEVANT EXPERIENCE

Data Analytics Intern | *Infosys* Aug 2025 – Oct 2025

- Analyzed datasets using SQL, Excel, and Power BI to generate engineering and business insights.
- Designed and maintained interactive Power BI dashboards, reducing reporting turnaround time by 40%.
- Performed data cleaning and quality checks to ensure accuracy and consistency across reporting workflows.

Junior Software Developer | *PugArch Private Limited* Jul 2025 – Jan 2026

- Built Python-based ETL pipelines to extract, clean, transform, and load 10,000+ structured records.
- Integrated MongoDB, MySQL, and PostgreSQL for scalable structured data storage and automated preprocessing, reducing manual effort by 60%.
- Collaborated with cross-functional teams to translate raw data into structured, analysis-ready formats.

Aerodynamics & Data Acquisition Lead | *E-Formula AshwaRiders (Student Club)* Mar 2023 – Jan 2026

- Designed real-time telemetry pipelines for a Formula Bharat electric vehicle, processing continuous sensor streams for speed, thermal, and battery metrics.
- Built monitoring dashboards for anomaly detection and performance assessment from live battery and vehicle telemetry feeds.
- Managed the full data lifecycle from raw sensor input through structured storage and engineering analysis, under strict timing and reliability requirements.

KEY PROJECTS

Real-Time Vehicle Telemetry & Digital Analytics System — *Python, LabVIEW, PostgreSQL, MQTT, ETL*

- Built a telemetry and ETL pipeline processing 1,000+ sensor records per session from continuous data streams, directly analogous to BMS data extraction and processing.
- Used MQTT for lightweight, reliable sensor data transport and PostgreSQL for historical performance analysis.
- Built dashboards for anomaly detection and vehicle/battery performance monitoring.

DL-SEC – Cybersecurity Anomaly Detection System — *Python, CNN-LSTM, Machine Learning*

- Developed an anomaly detection pipeline using CNN-LSTM for real-time monitoring and classification of streaming data, with fault-detection logic applicable to sensor health monitoring in embedded and battery systems.

EDUCATION

B.Tech – Computer Science and Business Systems Expected June 2026
St. Vincent Pallotti College of Engineering & Technology, Nagpur | CGPA: 8.69 / 10

CERTIFICATIONS

Data Analytics Internship Certification (Infosys) • AI-ML and Green Technology (Edunet) • MERN Stack Web Development
